(54) Medical electrical lead having a reinforced tine assembly

(57) A medical lead which has a reinforced tine assembly 26. In particular, the medical electrical lead of the present invention features an elongated lead body 10 covered by an insulative sheath 12. Positioned upon the proximal end of the lead body is a terminal assembly 14. Terminal assembly permits the lead to be connected to a pulse generator. Positioned at the distal end of the lead body is an electrode 22. Also positioned proximate the electrode is a tine assembly 26. The tine assembly is preferably made from an insulative bio-compatible material, preferably silicone. The tine assembly further features a reinforcement member 27 to prevent the tine assembly from elongating. In the preferred embodiment, a polyester is used to provide reinforcement member 27.
